Title of Project:	Neutral versus Loaded Instructions in a Bribery Experiment
Type of Product (e.g., Book, Paper, Documentary Film, Serial Article):	
Précis of 100 Words or Less:	This paper contributes to the ongoing methodological debate on context-free versus in-context presentation of experimental tasks. We report an experiment using the paradigm of a bribery experiment. In one condition, the task is presented in a typical bribery context, the other one uses abstract wording. Though the underlying context is heavily loaded with negative ethical preconceptions, we do not find significant differences. We conjecture that the experimental design transmits the essential features of a bribery situation already with neutral framing, such that the presentation does not add substantially to subjects' interpretation of the task.
