Title of Project:	Who gains from Non-Collusive Corruption?
Type of Product (e.g., Book, Paper, Documentary Film, Serial Article):	Paper
Précis of 100 Words or Less:	We explore the impact of non-collusive corruption on factor rewards and on the wealth distribution. We show that the distributional consequences depend crucially on the degree of capital market imperfections. With perfect capital markets, corruption does not redistribute wealth within the private sector. However, if borrowing is limited, members of the "middle class" suffer most since bribery drives them out of the capital market. This in turn makes access to credit easier for relatively wealthy individuals such that a group of them even wins. So, the interest of the latter in overcoming a corrupt regime may be very limited. In the empirical section, we provide cross-country evidence showing that a high level of corruption and a polarization in the income distribution go indeed hand in hand.
Start Date:	April 1, 2002
Projected Completion Date:	End 2003
Presentation or Publication Date:	Selected Presentations: April 2003 (Royal Economic Society), Warwick (GB) August 2003 (EEA), Stockholm
Presentation or Publication Venue:	
Original Language:	English

Projected Date of Availability in English:	
Relation to Other Efforts, Follow-on Projects (If Any):	Institutions and Development
Available in Hardcopy or Electronically (Y/N):	Yes http://papers.ssrn.com/sol3/papers.cfm?abstract_id=375760
