Title of Project:	The nexus between industrialization and environment: A case study of Indian enterprises
Type of Product (e.g., Book, Paper, Documentary Film, Serial Article):	Paper
Précis of 100 Words or Less:	India's rapid industrialization growth in small and large enterprises has had its impact on the environment; this has now become a major concern to the economy. The government, concerned about economic development and raising the standard of living of its people, has actively supported the development of the small enterprise sector. However, small enterprises tended to be the worst polluters and gave the least attention to environmental issues as part of their operations. Reasons for not installing pollution-control equipment were related to the fact that such expenditure did not contribute to the bottom line. Although existing environmental legislation is similar to that in industrialized countries, laxity of enforcement and corruption have generally prevented effective regulation of environmental pollution. This paper compares a sample of small and large enterprises in two of the most highly industrialized states in India, to determine whether there were any significant differences in the way they approach environmental issues. Some recommendations are suggested.
